# Reaching All Students

“The California Mathematics Council (CMC) believes that **all students** have the capacity to become mathematically competent and confident when provided a rigorous and challenging mathematical program supported by high expectations.”

# However...

Students learn math concepts  
at different rates.

All classes are heterogeneous.

# Flawed Responses

# 1. Tracking

# 1. Tracking

## 2. Acceleration

## 2. Acceleration

OK, within reason (one year)

For understanding and retention  
**Go Deeper, Not Faster**

# 3. Differentiation

(aka individualization)

◇ Destroys community of learners

◇ Too much work for the teacher

Many good ideas spread through...

Many good ideas spread through...

Fads

Many good ideas spread through...

Fads

but...

# Nothing Works!

for every student,  
every topic,  
every day,  
every class,  
every school,  
etc...

We must be eclectic!

(Select “what appears to be best  
in various doctrines”)

(Merriam-Webster)

Reaching the Full Range

Underlying Principles

Students must engage intellectually.

We need:

Access *and* challenge

Support for all

Alliance with the strongest

# Importance of strong students

◇ Politically

◇ Philosophically

◇ Pedagogically

# Reaching the Full Range

- ◇ differentiate by time, not content
- ◇ problem-centered curriculum
- ◇ group work
- ◇ whole-class discussion techniques
- ◇ tool-rich pedagogy

# Reaching the Full Range

- ◇ differentiate by time, not content
- ◇ problem-centered curriculum
- ◇ group work
- ◇ whole-class discussion techniques
- ◇ tool-rich pedagogy

# Reaching the Full Range

◇ differentiate by time, not content

◇ problem-centered curriculum

◇ group work

◇ whole-class discussion techniques

◇ tool-rich pedagogy

# Reaching the Full Range

◇ differentiate by time, not content

◇ problem-centered curriculum

◇ group work

◇ whole-class discussion techniques

◇ tool-rich pedagogy

# Reaching the Full Range

◇ differentiate by time, not content

◇ problem-centered curriculum

◇ group work

◇ whole-class discussion techniques

◇ tool-rich pedagogy

Teacher, Know Yourself

First step:  
differentiate by time, not content

# Time pressure is bad for students

# Pacing

◇ Constant forward motion

◇ Eternal review

# Practical Strategies

Extend Exposure  
while moving forward

# Slow Down each unit

Slow Down  
each unit

# Lag homework

Week 1: topic 1

Week 2: homework 1

Week 2: topic 2

Week 3: homework 2

Slow Down  
each unit

## Lag homework

Week 1: topic 1

Week 2: homework 1

Week 2: topic 2

Week 3: homework 2

Slow Down  
each unit

## Lag homework

Week 1: topic 1

Week 2: homework 1

Week 2: topic 2

Week 3: homework 2

Slow Down  
each unit

## Lag assessments

Week 1: topic 1

Week 2: homework 1

Week 3: quiz 1

Week 4: corrections 1

Week 2: topic 2

Week 3: homework 2

Week 4: quiz 2

Week 5: corrections 2

Slow Down  
each unit

## Lag assessments

Week 1: topic 1

Week 2: homework 1

Week 3: quiz 1

Week 4: corrections 1

Week 2: topic 2

Week 3: homework 2

Week 4: quiz 2

Week 5: corrections 2

Slow Down  
each unit

## Lag assessments

Week 1: topic 1

Week 2: homework 1

Week 3: quiz 1

Week 4: corrections 1

Built-in review!

Week 2: topic 2

Week 3: homework 2

Week 4: quiz 2

Week 5: corrections 2

# Slow Down quizzes and tests

# Slow Down quizzes and tests

Give students as much time as they need.

# Slow Down quizzes and tests

## Quiz and test corrections for “points”

- ◇ You can get help — specify who helped you
- ◇ Full explanations in your own words

Reducing time pressure makes  
a **growth mindset** plausible!

Use cumulative tests  
and other assessments

# Value at-home assessments

Students may impress you!

Reaching the full range

**Make support available  
outside of class**

Practical Strategies

Big-Picture Planning

# Front-load difficult topics

(if they are important)

# Put Some Time between related units

Proportions

...

Dilation

Tangent

...

Sine, cosine

# Separating related topics

- ◇ Proportions ... Dilation
- ◇ Tangent ... Sine and cosine
- ◇ Exponents ... Scientific notation
- ◇ Linear functions ... Systems of equations
- ◇ Exponentials ... Logarithms
- ◇ Sequences ... Series
- ◇ ...

# Separating related topics

- ◇ Proportions ... Dilation
- ◇ Tangent ... Sine and cosine
- ◇ Exponents ... Scientific notation
- ◇ Linear functions ... Systems of equations
- ◇ Exponentials ... Logarithms
- ◇ Sequences ... Series
- ◇ ...

Built-in review!

# Two units at a time?

Circles	Quadrilaterals	Construction	
<u>n<sup>th</sup></u> Power Variation	Systems	Trigonometry	Review

Slows down each unit  
Helps navigate both  
Sends a message

These structural strategies  
help to extend exposure  
*without taking more time,*  
*purchasing materials, or*  
*requiring professional growth.*

# Longer-Term Strategies

# Problem-Centered Curriculum

If necessary, find or adapt problems.

For example, instead of “graph this,  
graph that, what do you notice?”

# Make These Designs

# Group Work

- ◇ Random groups
  - new groups every 2 weeks
- ◇ Students (mostly) work independently
  - are expected to help each other
- ◇ If a group does not function well
  - intervene directly to get the behaviors you want
- ◇ If more than one group is stuck
  - stop them all for a class discussion

# Whole-Class Discussion Techniques

- ◇ **Time:** wait; count hands; tell your neighbor; rephrase; give a hint
- ◇ **Response mode:** on your fingers; in the air; on paper; all together
- ◇ **Agree/disagree;** votes
- ◇ **Etc.:** total silence; move around

*A tool-rich pedagogy*

# Slow Down each unit

$$(x + 5)(x + 1) = x^2 + 6x + 5$$

	$x$	$+5$
$x$	$x^2$	$+5x$
$+1$	$+1x$	$5$

$x$	$y_1$
$-5$	$0$
$-3$	$-4$
$-1$	$0$
$0$	$5$

Teach important ideas many ways

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x = (2x + 4) \cdot x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x$$

# Make a Rectangle

$$2x^2 + 4x = 2x \cdot (x+2)$$

$$(x + 8)x = x^2 + 8x$$

$$(x + 7)(x + 1) = x^2 + 8x + 7$$

$$(x + 6)(x + 2) = x^2 + 8x + 12$$

$$(x + 5)(x + 3) = x^2 + 8x + 15$$

$$(x + 4)^2 = x^2 + 8x + 16$$

$$y = x^2 + 8x$$

$$y = x^2 + 8x + 7$$

$$y = x^2 + 8x + 12$$

$$y = x^2 + 8x + 15$$

$$y = x^2 + 8x + 16$$

Find many geoboard squares  
of different sizes (and their areas).

Find many geoboard squares  
of different sizes (and their areas).

Find many geoboard squares  
of different sizes (and their areas).

Hint: there are more than 10

of different sizes (and their areas).

Hint: there are more than 10

Find many geoboard squares  
of different sizes (and their areas).

Hint: there are more than 10

What is the area of the inner square?

What is the area of the inner square?

outer square:  $6^2$

each triangle:  $\frac{2 \cdot 4}{2} = 4$

inner square:  $36 - 4 \cdot 4 = 20$

# Generalize

outer square:  $(a + b)^2$

each triangle:  $\frac{a \cdot b}{2}$

inner square:  $(a + b)^2 - 2ab = a^2 + b^2$

Area of the red square: 20

Area of the red square: 20

Area of the green square:

Area of the red square: 20

Area of the green square: 5

Area of the red square: 20

Area of the green square: 5

Side of the red square:

Area of the red square: 20

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Area of the red square: 20

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Side of the green square:

Area of the red square: 20

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Side of the green square:  $\sqrt{5}$

Area of the red square: 20

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Side of the green square:  $\sqrt{5}$

Conclusion:

Area of the red square: 20

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Side of the green square:  $\sqrt{5}$

Conclusion:  $\sqrt{20} = 2\sqrt{5}$

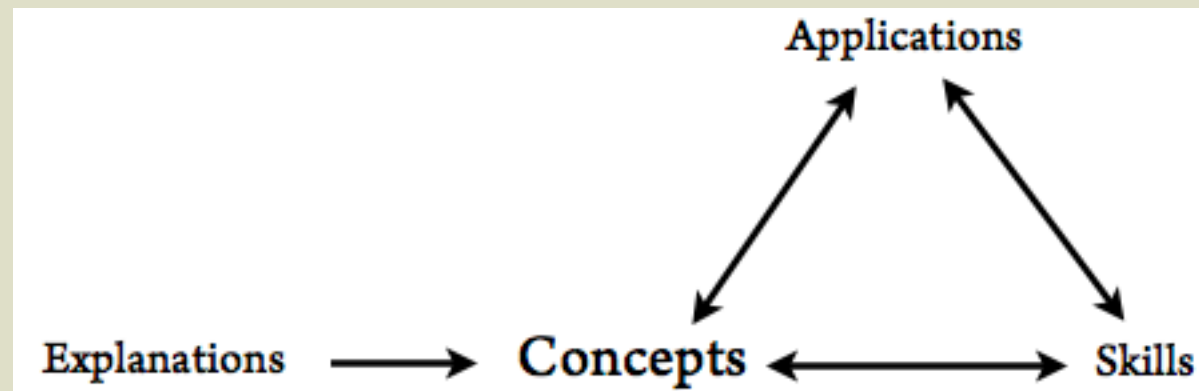

Area of the red square: 20

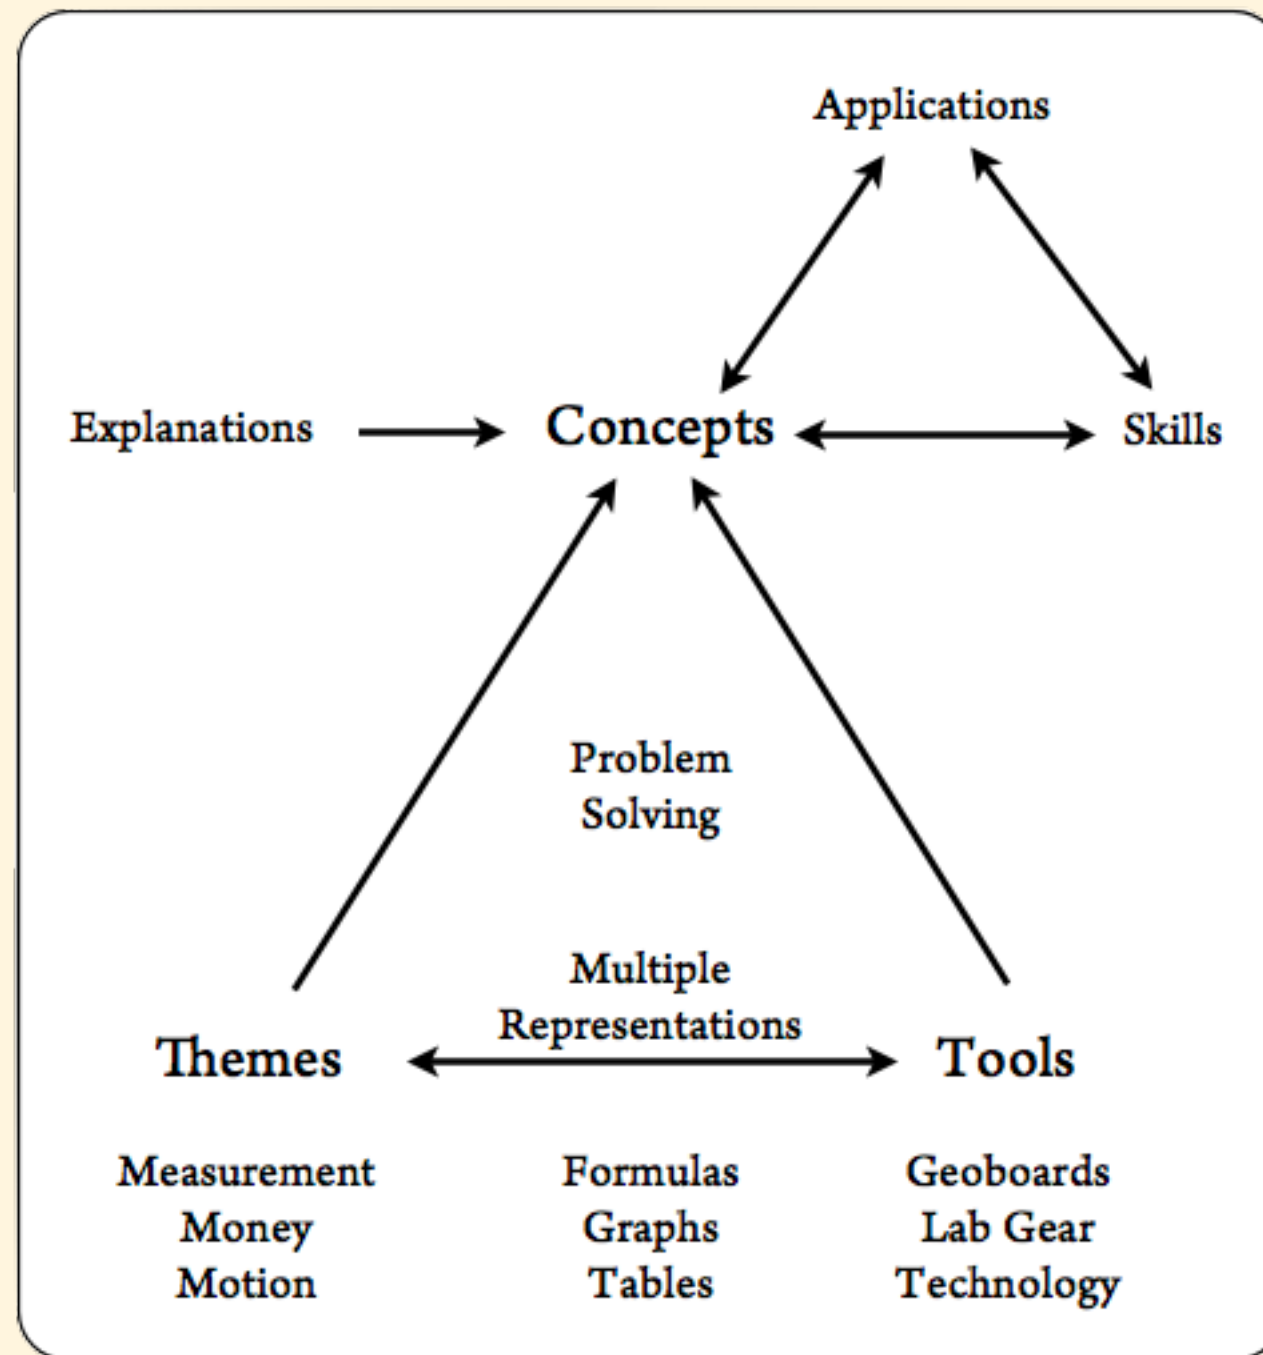

Area of the green square: 5

Side of the red square:  $\sqrt{20}$

Side of the green square:  $\sqrt{5}$

Conclusion:  $\sqrt{20} = 2\sqrt{5}$  !
