## There Is No One Way to Teach Math Actionable Ideas for Grades 6–12

Henri Picciotto, Robin Pemantle

A collaboration between a seasoned math teacher and a research mathematician, this resource offers balanced instructional ideas based around student intellectual engagement and skilled teacher leadership. Chapters offer practical suggestions and concrete examples to teachers of grades 6-12 on multiple aspects of the job like manipulatives, technology, lesson planning, group work, classroom discussion and more. In opposition to a 'one-size-fits-all' curriculum, the authors offer multiple entry points for teachers and departments to discuss and enhance their practice, making it essential reading for any math classroom or professional development opportunity.

"What a wonderfully affirming and informative addition the library of every teacher of secondary mathematics! *There Is No One Way to Teach Math* attends to all the right topics as it practically illuminates the importance of discussion, collaboration, variety, tools, and bridging the unhelpful either-ors with common-sense balance."

Steve Leinwand, *American Institutes for Research, USA*

"*There Is No One Way to Teach Math* is humane, validating, and wise. It reads like a conversation with the master teacher down the hall: grounded, realistic, and refreshingly honest. I look forward to assigning this nutrient-rich book as required reading in my course for in-service and pre-service teachers."

Amanda Cangelosi, *Utah State University, USA*
